DIAMOND BILT TRUCK MOUNTED EMULSION SPRAYERS

Diamond Bilt Truck Mounted Units are a great fit for the contractor with a dedicated tack service truck. These units use the truck's engine coolant to heat the tack, allowing you to heat your material while on the way to the job site. With their compact design and multiple mounting options, we have a unit that will fit any truck. Like all Diamond Bilt emulsion sprayers, these tack pots come standard with a 25' hose and a Diamond Bilt lightweight Spray Wand featuring a stay cool handle and no drip tip.

Options and customization available to make sure your unit fits all of your needs.
